Studies

13 studies available

Bcell Dev b-cell dev - Homo sapiens - 53,958 cells x 33,645 genes x 10 clusters Single-cell Regulatory Network and Gene Activity Landscape during Human B-cell Development	Hepatoblastoma study-hepatoblastoma - Mus musculus/Homo sapiens - 14,635 cells x 11,778 genes x 10 clusters A Developmentally Promiscuous Niche in Normal Liver to Hepatoblastoma mediated by Ccnc/Ccnc2 Axis	ICCA study-icca - Homo sapiens - 10,805 cells x 11,778 genes x 10 clusters Single-cell transcriptomic analysis suggests two molecularly distinct subtypes of intrahepatic cholangiocarcinoma
PBMC14k PBMC14k - Homo sapiens - 13,835 cells x 8,846 genes x 7 clusters Single-cell RNA sequencing of human peripheral blood mononuclear cells of 7 sorted cell populations	Tregs Tregs - Mus musculus - 4,373 cells x 14,712 genes x 4 clusters Single-cell RNA sequencing of regulatory T cells (Tregs) of a mouse non-lymphoid tissues	Tex Tex - Mus musculus - 8,464 cells x 9,861 genes x 3 clusters Single-cell RNA sequencing of progenitor, intermediate and terminally exhausted CD8+ T cells from tumors and chronic viral infection
Glutamatergic lineage Glutamatergic lineage - Homo sapiens - 10,481 cells x 21,481 genes x 7 clusters Human Cerebellum Glutamatergic Neuron Lineage Developmental	GSE155446 GSE155446 - Homo sapiens - 10,537 cells x 26,040 genes x 13 clusters Medulloblastoma patient GSE155446	ATRT ATRT - Homo sapiens - 18,274 cells x 18,274 genes x 10 clusters An atypical teratoid rhabdoid tumor (ATRT) is a very rare, aggressive tumor of the central nervous system, occurring mostly in the cerebellum.
BreastCaWu2021 BreastCaWu2021 - Homo sapiens - 16,305 cells x 13,605 genes x 10 clusters A single-cell and spatially resolved atlas of human breast cancers	sc-atlas-liver-cancer sc-atlas-liver-cancer - Homo sapiens - 10,435 cells x 15,718 genes x 10 clusters sc-atlas-liver-cancer	liver-cancer2-scRNA-seq liver-cancer2-scRNA-seq - Homo sapiens - 104,905 cells x 12,982 genes x 10 clusters liver-cancer2-scRNA-seq
liver-cancer3-scRNA-seq liver-cancer3-scRNA-seq - Homo sapiens - 96,305 cells x 15,778 genes x 10 clusters liver-cancer3-scRNA-seq
